Experience

Atlassian

SOFTWARE ENGINEER II - ANALYTICS PLATFORM

Remote - McAllen, TX

October 2024 – Present

- Spearheaded migration of ~75 individuals across ~50 teams from a legacy data proxy service to a modernized Databricks workspace, resolving 272+ support tickets to ensure uninterrupted **Databricks** querying functionality.
- Drove deprecation of legacy **AWS**-hosted services, saving ~\$90k annually in hosting costs and reducing **Splunk** logging usage by 85.4% across team-owned services.
- Owned observability for a critical **Spring Boot** proxy service, using **SignalFx** and **Splunk** via **Terraform** config to deliver detectors, alert rules, and dashboards that reduced time-to-detect by 92% and time-to-resolve by up to 99%.
- Drove **CI/CD** DevEx initiatives for a **Provisioning** platform, cutting P90 release cycle time by 51.7% and developer toil by 54.9%, reducing flaky pipeline rate by 32%, and accelerating integration test suites by up to 72.5%.
- Stood up a self-hosted **DataHub MCP** for AI-driven data discoverability via **Rovo**, onboarding 350+ users and achieving 100% direct team AI adoption rate.

Atlassian

SOFTWARE ENGINEER - ANALYTICS PLATFORM

Remote - McAllen, TX

July 2023 – October 2024

- Migrated feature flagging functionality from **LaunchDarkly** to **Statsig** by building a self-targeting UI in **React**, converting ~40% of platform users within 2-3 weeks and reducing override configuration time by ~71%.
- Detected 72% of total **Statsig**-related data ingestion issues by delivering a **Statsig** event count mismatch script, reducing mismatched events from ~100 daily to ~1-3 daily (98% reduction).
- Streamlined experimentation data observability cycle time by ~84% and implemented daily auto-backfills with self-healing functionality, saving ~48 hrs turnaround time over weekends.
- Built a **Python Databricks** validation script that reduced fact table validation time by ~91%, and designed a governance UI component in **Figma** and **React** for self-service event ingestion cost controls.
- Led migration of internal data catalog service to **AWS SharedVPC**, resolving technical ambiguities through cross-team collaboration, and reduced technical debt across 85% of team-owned legacy services.

JPMorgan Chase & Co.

SOFTWARE ENGINEERING INTERN - CORPORATE AND INVESTMENT BANKING

Houston, TX

June 2022 – August 2022

- Designed UI/UX flows in **Excalidraw** for an integrative/responsive dialog component to be utilized by bankers to save sets of peer companies that can be exported and analyzed from various web applications.
- Teamed up with and mentored a co-intern to build the component using **React.js** with **Typescript** and **Storybook** for subcomponent development and front-end implementation.

University of Texas Rio Grande Valley

MOBILE SOFTWARE ENGINEERING INTERN - UTRGV DEPARTMENT OF FAMILY MEDICINE

Edinburg, TX

December 2020 – May 2022

- Designed **Figma** UI prototypes for a mental wellness mobile app with UTRGV's Family Medicine department.
- Achieved a MVP with **Flutter** and **Dart** for cross-platform mobile development on both iOS and Android devices.

Projects

Chap Shuffle (Chrome Extension)

TECHNOLOGIES: TYPESCRIPT, PREACT, PLAYWRIGHT

- Built and published a **Manifest V3 Chrome** extension in **TypeScript** and **Preact** that adds randomized chapter shuffle playback to **YouTube** videos, syncing user settings across devices via Chrome storage.
- Drove adoption to 78+ active users, 208+ page views, and 100+ YouTube shuffle sessions started following release on the **Chrome Web Store**.

Education

University of Texas Rio Grande Valley

BACHELOR OF SCIENCE IN COMPUTER ENGINEERING — GPA: 3.98/4.0

Edinburg, TX

December 2022

Skills

Technologies

Python, Kotlin, Typescript, React.js, Spring Boot, Flask, Node.js, Dart / Flutter

Platform and Tools

Databricks, AWS, Terraform, SignalFx, Splunk, DataHub, Docker, Kubernetes, Statsig, Git / Github
